To Whom It May Concern:

This letter is written as a recommendation letter for Fresh-Aire UV and Jupiter Tequesta Air Conditioning.

Country Day is a pre-school that accommodates 275 children ages 12 months to 11 years old. We have 13 classrooms and our building is 15,000 square feet. Due to the nature of our business, we are exposed to a large amount of germs and illness, especially during the winter months. Apparently our air handlers and coils were part of the problem because they were filled with mold and fungal growth. In January 2003 we purchased two ultra violet lights as a test in two of our classrooms. They were provided by Fresh-Aire UV and installed by Jupiter Tequesta Air Conditioning. The air handlers were tested 6 months later and the results were terrific— there were no signs of mold, spores or bacteria. It definitely improved the air quality in these classrooms. We noticed that there was less illness in those classrooms during that period of time.

In October 2003 we purchased another unit and in February 2004 we purchased three more. Hopefully by the end of 2005 all our air handlers will have these UV lights installed. It definitely makes a difference with regard to germs, allergies and illness.

I would highly recommend the product that Fresh-Aire UV sells and the installation provided by Jupiter Tequesta Air Conditioning. If you have any questions, please call.

Sincerely,
Mary Jeanne Sudell
Director
