The Air-Conditioning, Heating, Refrigerating Exposition (AHR Expo) is always a showcase of the industry's greatest products. The 2013 Expo in Dallas was no exception.

Air Purifier

The commercial series APCO rack system is a non-ozone air-purification system for HVAC units in commercial, industrial, and institutional facilities. It features ultraviolet-C (UVC) germicidal irradiation for airborne and HVAC-unit internal-surface disinfection combined with gas-phase air purification and photocatalytic oxidation (PCO) to capture and neutralize volatile organic compounds. The system

can be installed in all brands of package and air-handling units ranging from 10 to 200 tons. —FreshAire UV

CLEAN COILS THROUGH THICK AND THIN.
