DALLAS — The APCO Rack System is an air purification system for HVAC units in commercial, industrial, and institutional facilities. It combines UVGI for airborne and HVAC internal surface disinfection, with gas-phase air purification and photocatalytic oxidation (PCO) to capture and neutralize VOCs. The company says the system increases energy efficiency and reduces maintenance by eliminating biological growth on HVAC coils for hospitals, schools, offices, hotels, and other commercial buildings.

It is designed to install quickly inside HVAC units ranging from 10 to 200 tons.
