

PRODUCT FOCUS: HVAC

HVAC

**OUT THE DOOR**

Berner's in-ceiling mount (ICM) Series has added the ICB, the HVAC industry's first in-ceiling flush-mount air curtain rated for doorways with up to 16-ft.-high ceilings, to prevent doorway energy losses in hotels, hospitals, office buildings, schools and other commercial facilities. Efficient 1-HP motors, combined with a proprietary Pro-V Nozzle design that generates 50% more velocity at the floor versus standard ceiling-mounted units, make the 16-ft. range possible. **PURE AIR**

The APCO Rack System from Fresh-Aire UV is a non-ozone air purification system for HVAC units in commercial, industrial and institutional facilities. It is the first device to combine UVGI for airborne and HVAC internal surface disinfection with gas-phase air purification and photocatalytic oxidation (PCO) to capture and neutralize VOCs. The APCO increases energy efficiency and reduces maintenance by eliminating biological growths on HVAC coils for hospitals, schools, offices, hotels and other commercial buildings. **QUIET AS A MOUSE**

Isis from Big Ass Fans is a versatile fan for spaces with ceilings as low as 12 ft. Hidden inside the sleek exterior is the unit's brain. A silent, proprietary prime mover enables the fan to operate at less than 40 dBA at maximum speed, so users won't even hear it in a deserted library at midnight. Perfect for smaller spaces, the 8- to 10-ft. diameter Isis carries a 10-year non-prorated warranty with factory installation and is UL listed for wet locations.
