

FRESH-AIRE ICE UV

Award-Winning Ice Machine Disinfection

ICE UV from fresh-Aire UV is a germicidal UV light system designed for installation in ice making machines. It helps control the growth of mold, slime and biocontamination on interior surfaces and components, resulting in big savings on ice machine maintenance.

ICE UV has won both an AHR Innovation Award and a ComforTech Product Showcase Award because of its innovative application and the excellence of its design.

Our newest related product, Ice UV Mini for countertop ice & water dispensers, is based on our Mini UV (for Mini-split AC systems) which is also an AHR Innovation Award winner.
