

COMMERCIAL CRUISE SHIP INSTALLATIONS

Indoor Air Quality & HVAC Efficiency

Improve the indoor air quality and comfort of passengers and crew with germicidal UVC light products from Fresh-Aire UV.

UVC disinfection for HVAC is now recommended by the CDC and ASHRAE for use in hospitals, schools, and hotels, and is an obvious choice for the critical indoor environment of cruise ships.

Duct mount and coil mount high-output non-ozone germicidal 254 nanometer UVC light systems inactivate microorganisms such as viruses, bacteria, and mold. They also improve energy efficiency and extend the life of HVAC equipment by reducing mold & biofilm on cooling coils.
