Subject:-UV Light

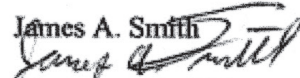

Every once in awhile it's good to review a challenge with successful results.

With the warmth and humidity of air at our facility, a perfect environmental of mold was created in our P-TAC air conditioners. We were faced with constantly removing and cleaning mold from the P-TAC coils.

As we know that UVC light scientifically kills mold, we decided to try and install your Fresh-Aire UV Tight Fit Kit for our P-TAC A/C units. After a test trial on one of our units, we noticed a reduction of microbial growth on the coils and the elimination of musty mold odors.

As a result, we now have your Fresh- Aire UV lights in two of our buildings and plan to continue adding thru out all of the buildings, including the AHU units supplying the lobby/administrative areas. Besides improved indoor air quality without the musty mold odors, we have reduced our maintenance tasks, of removing and cleaning mold from the coils. This saved hours of labor and eliminated the cost of cleaning fluid.

Thank you for your UVC technology for P-TAC applications which, by the way, was Acknowledged and praised by the local health inspector.

James A. Smith
