

Hello Ron,

We installed your ICE UV light in the ice machine at Subway in December of 2009. Prior to the installation, Subway had experienced continuous problems with their machine, resulting in many costly service calls. In spite of an aggressive preventative maintenance program, the ice machine required frequent cleaning to keep it on line. The evaporator and distribution tubes were growing mold and the machine was producing contaminated ice.

Since the installation of your product the mold growth has ceased and we have not had to return for an unscheduled service need. Our customer is happy and has saved hundreds of dollars of repair expense. I would highly recommend the ICE UV to anyone that owns a commercial ice machine.

Sincerely,

Mike White
